Our main aim is to breed sheep that meet the requirements of the commercial sheep farmer. We pay particular attention in ensuring we are meeting the requirements of our customers who in return award us with repeat sales.

The six shearlings we are offering for sale are bred from sires that have made a huge impact on our flock and indeed on the Texel breed over the years.

Navac Flock

The Navac flock was established in the year 2000. Two hogget in-lamb ewes and three ewe lambs were initially purchased from Frank Harrington's flock. This was followed by investment in rams purchased from other leading Irish flocks, such as; the Greenhill flock, Ballybrooney, Ryan, and Mullan flocks. Subsequent in-lamb ewes were purchased from Larahill,, Hillcrest, Milestonehill, Chessy, Macetown and the Foundry flock.

The Navac Flock gradually developed over the years with much success at local shows. In 2011 a ram was imported from the famous Glenside Flock in Scotland. Glenside Roller shares the same blood lines as the renowned Glenside Razzle Dazzle. Roller is by Strathbogie Python. Roller had huge impact on the flock and as a result of his influence the Navac Flock was awarded the Flock of the Year in the All Ireland Large Flock Competition in 2014 and also, the winning pen of 10 Ewe Lambs.

In more recent years, with the help of embryo transfer technology, the Navac flock continues to grow from strength to strength.

All hoggets being offered for sale are sired by Glenside Roller and are in lamb to the 2016 Supreme Champion in Blessington-Thornville Yogi Bear UVI 16022.

All ewes are on the Heptovac P system and are dosed for Fluke and worm.

I would like to wish all purchasers at this sale every success in the future.

How to select a ram fit for purpose?

Evaluations should never be the only tool you use when selecting animals for breeding. Animals must also be examined to ensure the animal is also physically correct; an animal that is not physically correct (ie. mouth, feet, etc.) cannot compensate for this fault regardless of its evaluation and should be avoided for breeding purposes.

CPT Sire – This ram was used in the Sheep Ireland Central Progeny Test

EuroStars – How to interpret them

- Each star represents where the animal ranks on each index in 20% bounds
- One star represents the bottom 20% of the breed
- Five star represents the top 20% of the breed
- The higher the stars, the higher the predicted profitability of that animal

Rank

- This figure indicates more precisely where the animals rank within the breed. eg. Top 11% (see example below)
- This is displayed with the black pointer, the further to the right these are on the scale, the better its position with the breed.

Acc % (Accuracy%)

- This figure is very important as it represents the amount of data behind each evaluation. Where Acc is low, much less emphasis should be placed on the evaluation, and vice versa.
- This is displayed with the grey pointer, the further to the right these are on the scale, the more information this evaluation is based on. e.g. Acc 43% (see example above)

Acc % parameters

V.Poor, 0% - 14%	Poor, 15% - 24%
Fair, 25% - 34%	Good, 35% - 49%
V.Good, 50% and above	

Indexes & Traits

- 1) **Replacement (€1.126)** – If a farmer desires a ram to breed both lambs both for slaughter and replacement ewe lambs then they should select a ram based on this index. The bulk of this index is a combination of Lamb Survivability, Days to Slaughter, No. of lambs born & Daughters milk. The € value beside the index represents the difference in profit that each lamb sired from this ram will have.
- 2) **Terminal (€0.542)** – If a farmer desires a ram to breed only lambs for slaughter then they should select a ram based on this index. The bulk of this index is a combination of Lamb Survivability and Days to Slaughter. The € value beside the index represents the difference in profit that each lamb sired from this ram will have.
- 3) **Days to slaughter** – This ranks animals on their genetic ability to grow. The index associated with this trait represents the difference in the predicted number of days required for the progeny of this ram to reach the desired slaughtered weight compared with other animals of the same breed.
- 4) **Lamb Survivability** – This ranks animals based on lambing ease and lamb survival rate. Every positive % point on this index is an extra lamb surviving to 40 days and vice versa.
- 5) **No. of Lambs Born** – This ranks animals based on the predicted prolificacy of the females from this animal compared with other animals of the same breed
- 6) **Daughters Milk** – This ranks animals based on the predicted milking performance of their daughters compared with other animals of the same breed
